

INNOVACION. Estadística experimental. Medición del turismo a partir de teléfonos móviles. INE. DATOS DE DICIEMBRE DE 2022.

En síntesis, lo que se pretende con este estudio es conocer de forma agregada, a través de la señalización de los teléfonos móviles, mediante eventos activos y pasivos captados por las antenas de telefonía:

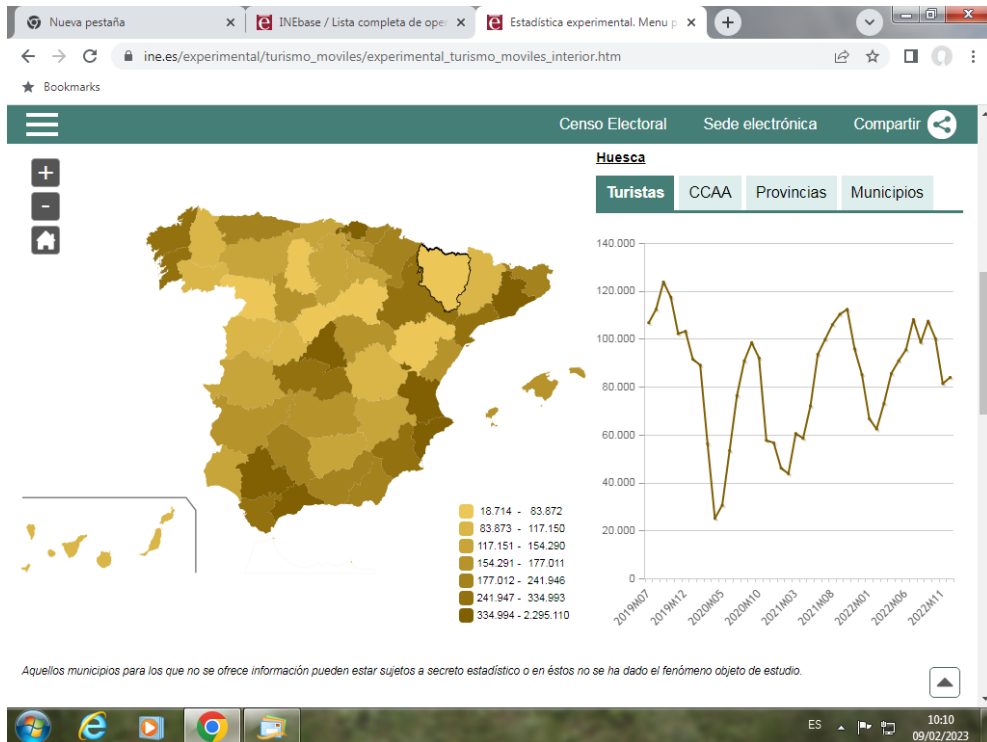

1. La procedencia y país/países que visitan los turistas residentes en sus viajes al extranjero.
2. La procedencia de los turistas extranjeros que visitan las distintas comunidades autónomas, provincias y municipios.
3. **La procedencia y destino de los turistas residentes que visitan las distintas comunidades autónomas, provincias y municipios.**

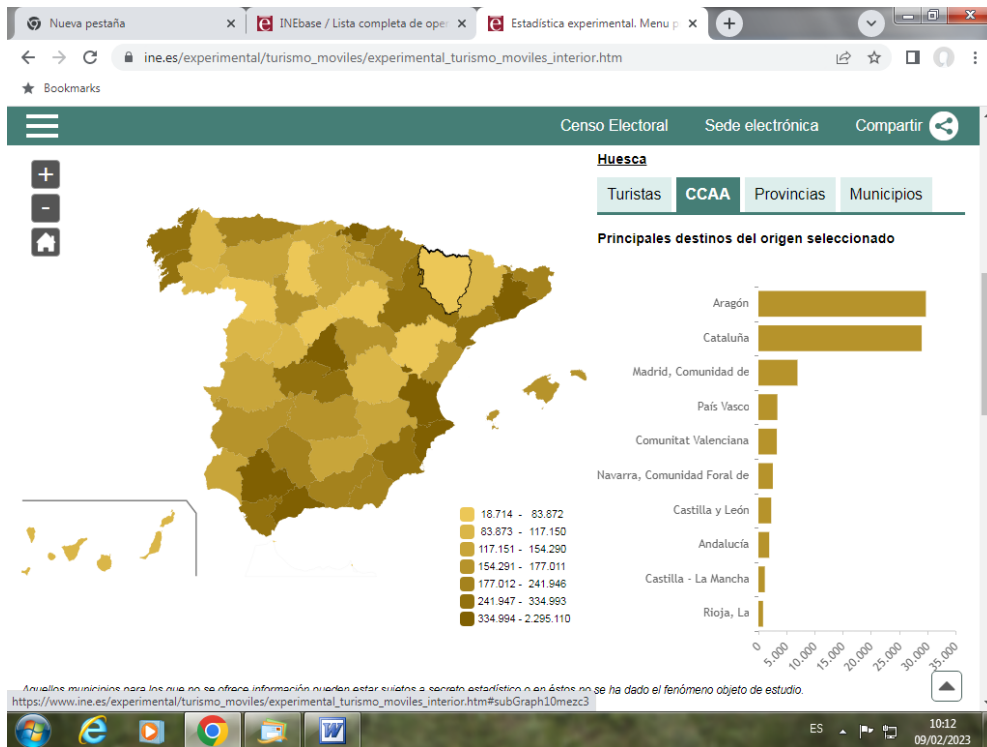

En nuestro caso (turismo de interior) se muestran los resultados de la provincia de Huesca para después mostrar los de los municipios del Valle del Aragón. Muestra individual y sobre el total de los registros existentes a nivel nacional.

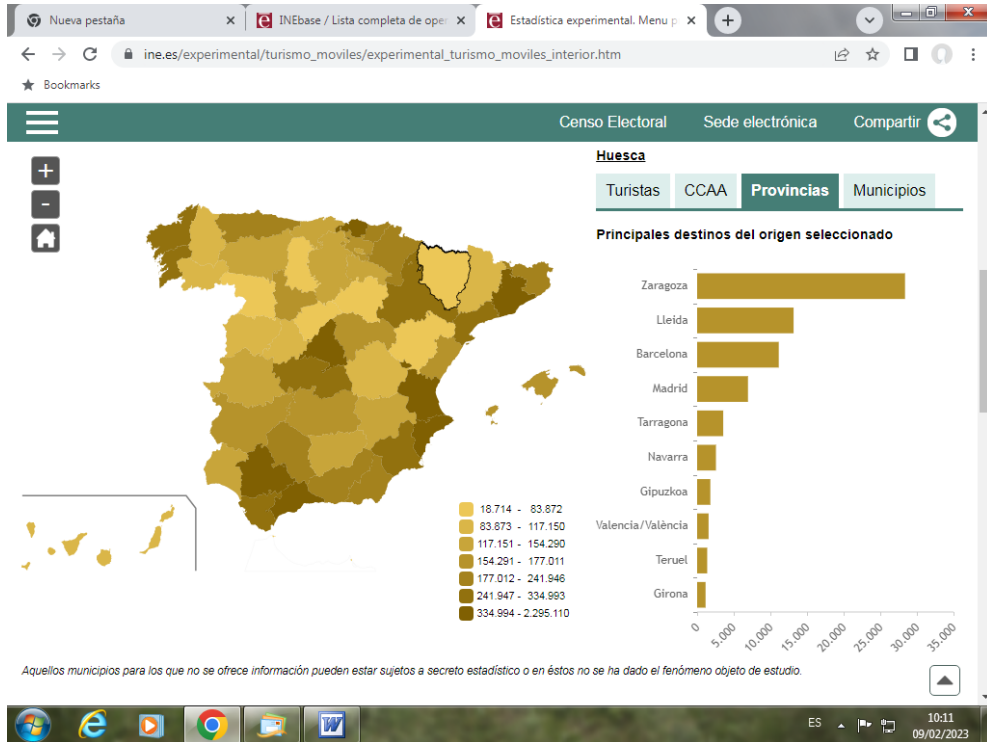

HUESCA
